

Assembly Instructions for PaddleSki Swivel Seat Kit

Parts for the PaddleSki Swivel Seat Kit include:

- A) Swivel Seat
- B) 1 Long Aluminum Yoke
- C) 1 Short Aluminum Yoke
- D) 1 Aluminum Board
- E) 1 Quick Release Seat Mount for the Swivel Seat
- F) 2 Rod Holders with Flush Mount Adapters

Hardware for the PaddleSki Swivel Seat Kit includes:

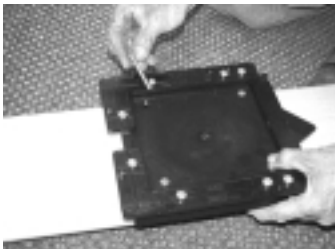

- a) 4 black knurled nuts
- b) 4 large washers
- c) 4 large bolts
- d) 4 small bolts with washers & wing nuts
- e) 8 half inch screws

Attach the flush mount adapters for the rod holders at each end of the long yoke in the predrilled large hole.

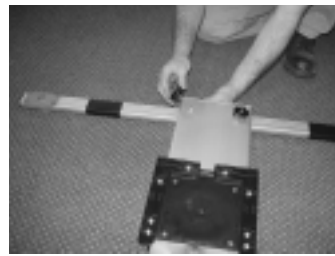

Use the half inch screws to attach the adapters to the yoke with a philips head screwdriver as shown.

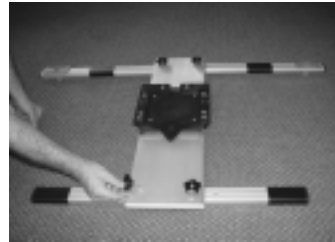

Place the swivel seat mount in the center of the aluminum board and attach it using the four small bolts, washers & wing nuts. The aluminum board has 4 predrilled holes in the center for this.

Make sure that the wing nuts are tightened properly by hand.

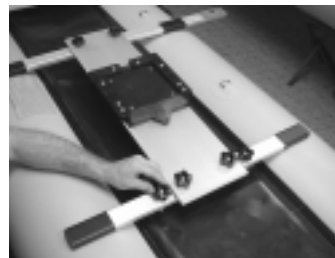

Place the aluminum board over the long yoke and attach it using 2 long bolts, 2 large washers & 2 black knurled nuts as shown. The bolts should be inserted from under the aluminum yoke so that the knurled nuts are on top.

Attach the small yoke at the other end of the aluminum board as shown using 2 long bolts, 2 large washers & 2 black knurled nuts.

Unscrew the knurled nuts on the center yoke of the PaddleSki and remove the upper aluminum yoke. Place the assembled frame of the swivel seat kit on the PaddleSki.

Bolt the smaller yoke of the frame in place of the upper yoke that was removed to secure it to the PaddleSki. The longer yoke simply rests on the pontoon towards the stern.

Place rod holders in the adapters at both ends of the long yoke.

Finally slide the swivel seat into the quick release seat mount installed on the aluminum board and make sure that the spring loaded lever mechanism locks in place.

The PaddleSki Swivel Seat Kit is now ready for you to go fishing.
